

# Mixing and Matching COVID-19 Vaccines

**IN CANADA**, the COVID-19 vaccines that are most widely used require **two (2)** doses

Receiving **both doses** gives you the **most protection** against COVID-19 and its new variants

You may be offered a different brand of vaccine for your second dose than you received for your first dose

**Remember, the best vaccine is the one earliest available to you**

## *Is it Safe to Mix Brands?*

**In Canada**, public health officials support mixing vaccines

It is safe, does not reduce the vaccines effectiveness, and allows more people to receive their second dose sooner

If you received Moderna or Pfizer as your first dose, it is safe to get **Moderna or Pfizer** as your second dose

If you received AstraZeneca as your first dose, it is safe to get **Pfizer, Moderna, or AstraZeneca** as your second dose

**Vaccination continues to be an important part of ending this pandemic**

**Get your second dose today!**
